## (54) PRESSURIZING DEVICE FOR STRESS CONE

### (57)Abstract:

**PURPOSE:** To provide a pressurizing device for a stress cone, which is capable of keeping an interface pressure between the stress cone and a cable core in constant, by a method wherein pressure abutment between the stress cone and the cable core or especially sufficient pressure abutment between the rise-up part of the semi-conducting part of the stress cone and a cable is maintained.

**CONSTITUTION:** A cylindrical pushing metal 10 for pushing a stress cone 3, fitted on the outer periphery of a cable 2 axially, is provided with a pushing member 13, for pushing the base part of the stress cone 3 toward the core of the cable, on the internal surface of the cylindrical pushing metal 10. The pushing member 13, fitted between the pushing metal 10 and the base part of the stress cone 3, prevents the base part or the skirt part 3a of the stress cone 3 from being raised up when the stress cone 3 is pushed by the pushing metal 10 through a spring 12. According to this method, a sufficient pressure can be applied on the rise-up part of the semi-conducting part of the stress cone, on which a stress is concentrated.
